10 AIRLINES / UK + INDIA
MAR TO AUG 2026 VS 2025

$$LF = \Sigma\, RPK \,/\, \Sigma\, ASK$$

$$Score = \Delta Pax\% \times 100 + \Delta LF$$

I compared how 10 airlines handled THE 2026 SHOCK

half cut seats. half added them.

Power BI · SQL · Python

Jet2 +8.9% pax

he 2026 airline shock: who handled it best?
verview

ke: Mar to Aug 2026 vs Mar to Aug 2025
SpiceJet excluded (no 2025 data)

MARKET
All
Filter every page

LOAD FACTOR
85.1%
all months, all airlines

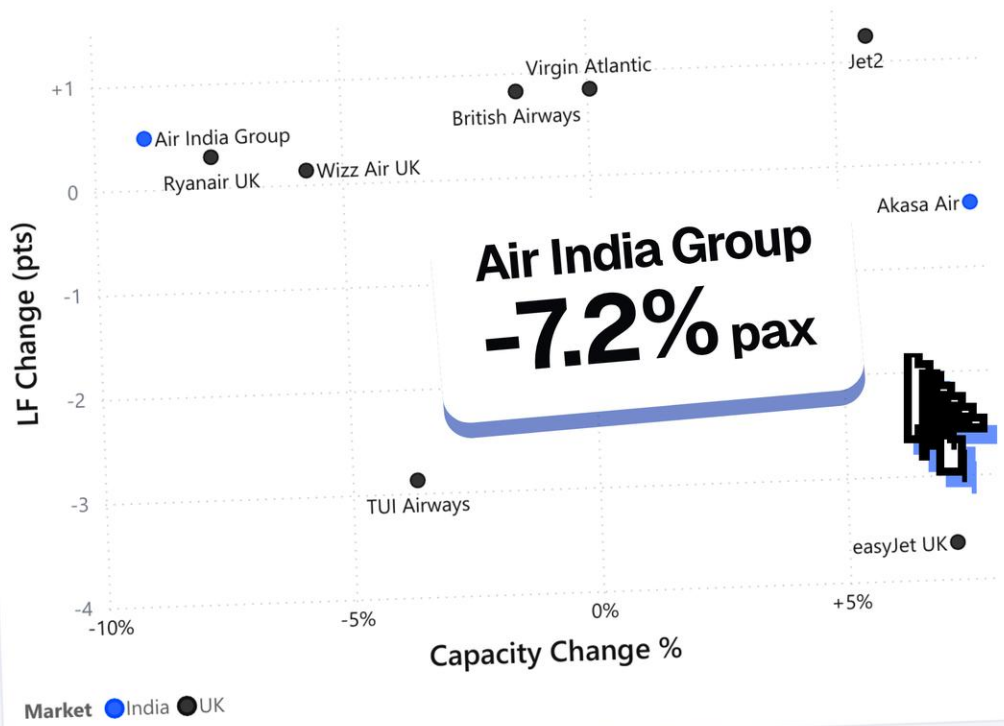

LOAD FACTOR CHANGE
-0.5
points, shock vs baseline

CAPACITY CHANGE
+0.7%
seats offered, matched months

PASSENGER CHANGE
+0.2%
passengers carried, matched months

Did cutting capacity protect load factor?

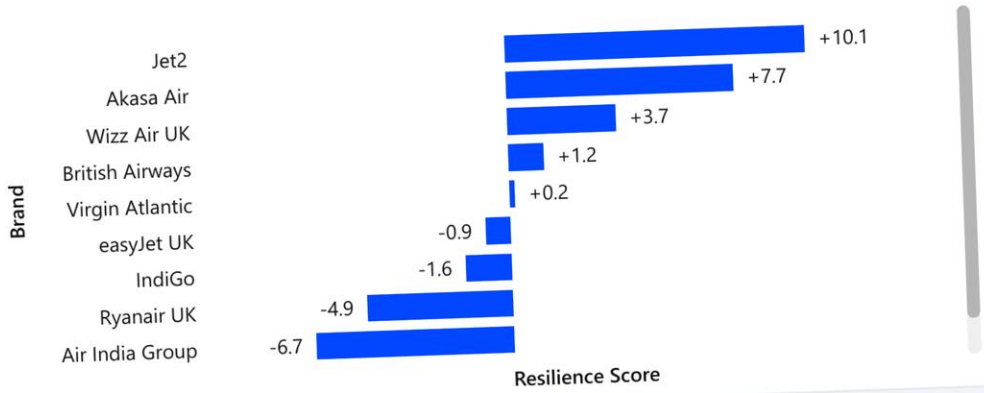

Each dot is an airline. Left of centre means seats were cut. Higher means load factor improved.

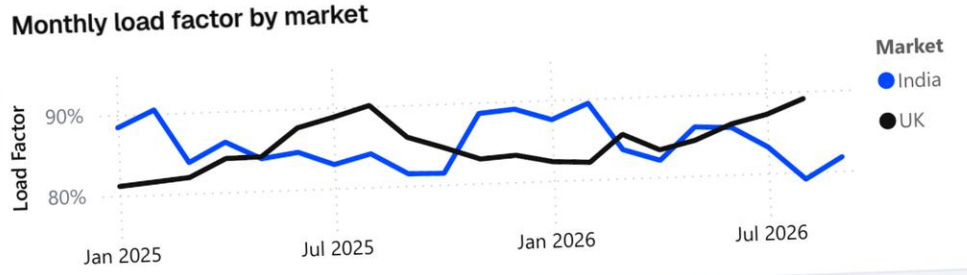

Air India Group -7.2% pax

Resilience score by airline

Passenger change (%) plus load factor change (pts). Higher is better.

Monthly load factor by market

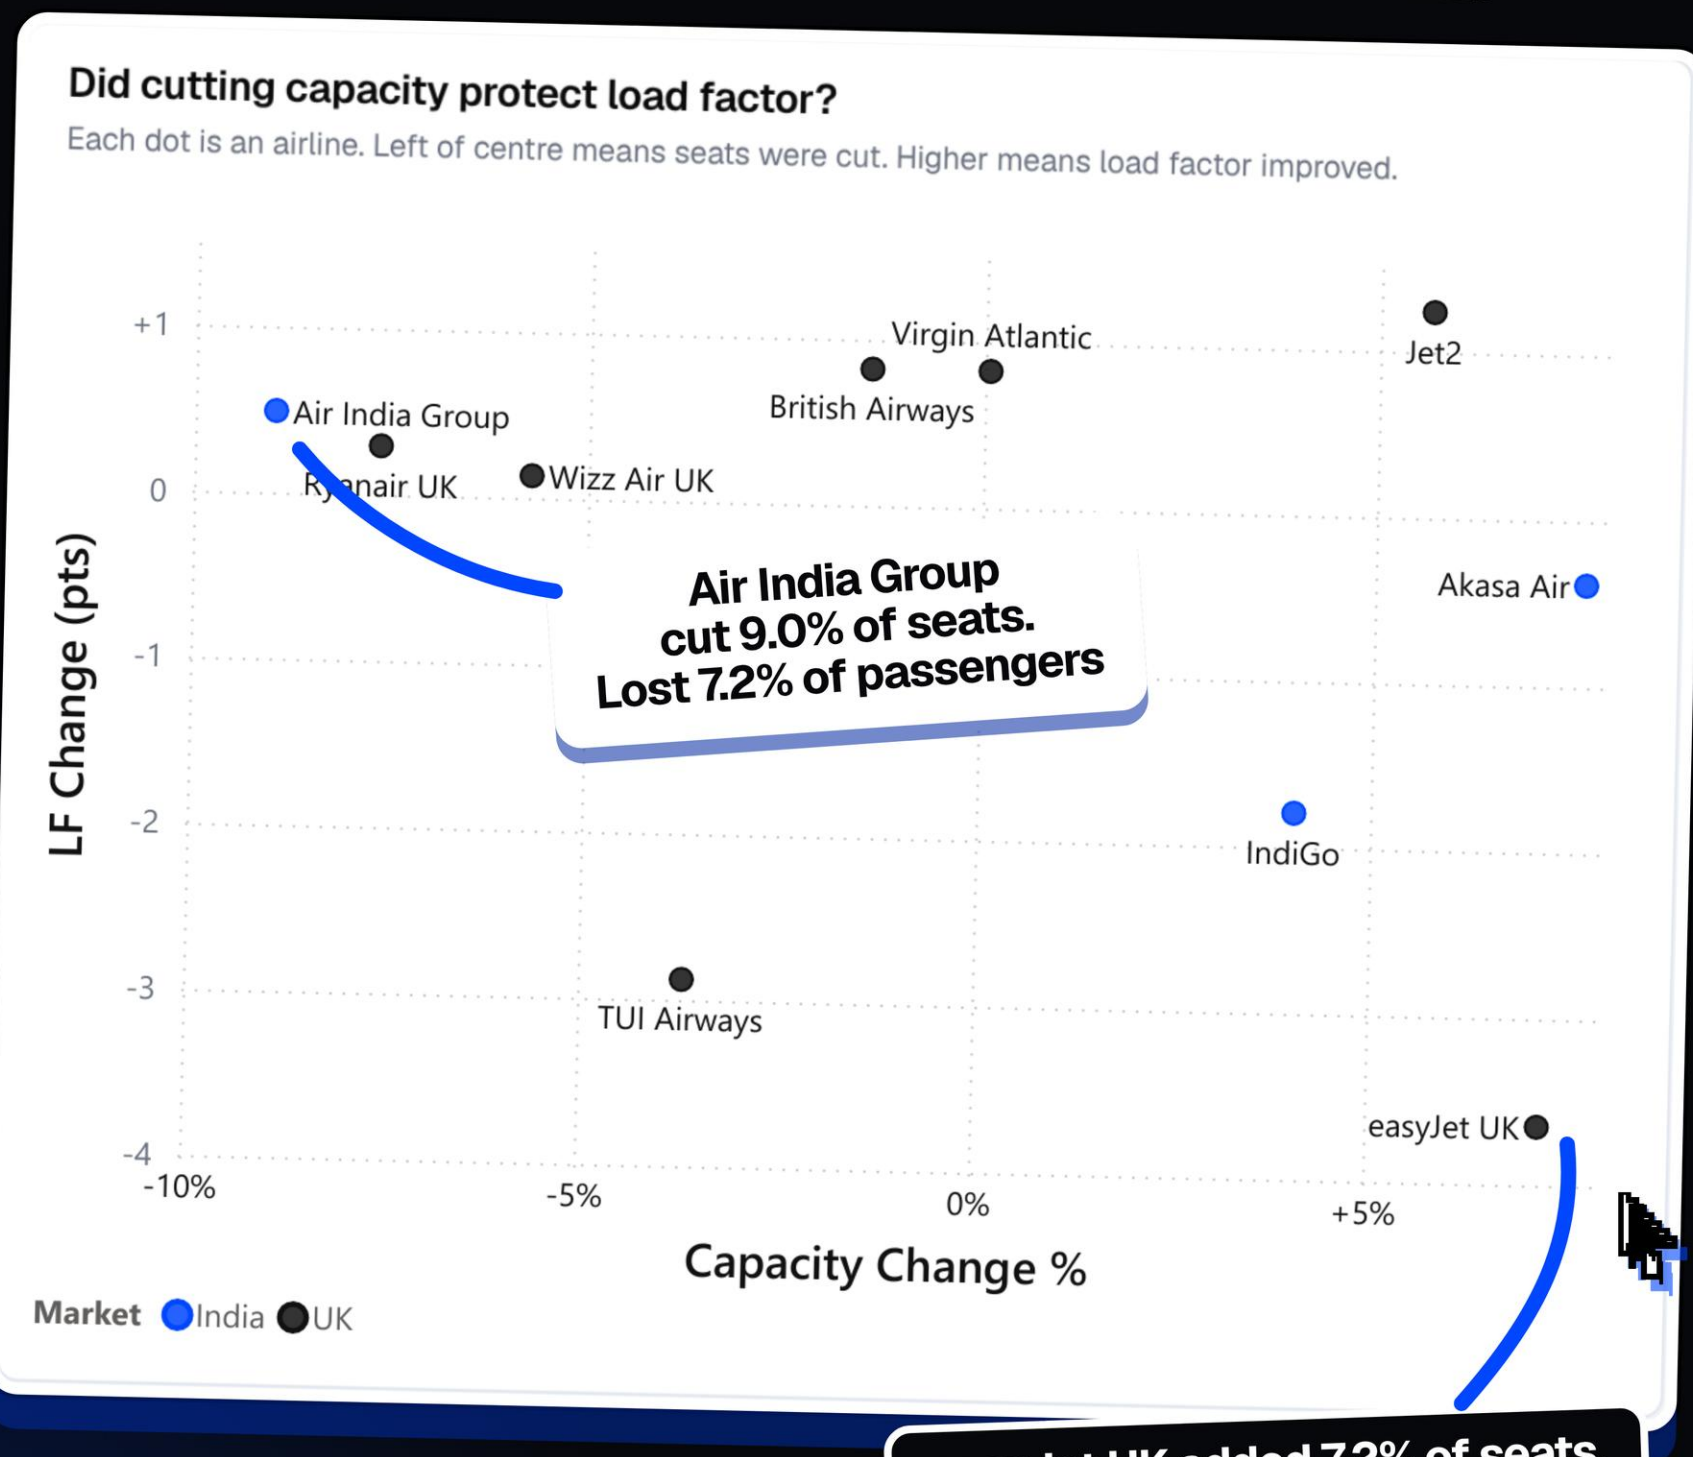

easyJet UK -3.6 pts LF

real Power BI. code on slide 3.

VARESH NIRBHAVNE

Cutting seats protected load factor. It cost passengers.

$$\Delta LF = LF_{2026} - LF_{2025}$$

seats vs passengers: +0.78 correlation (n=10)

Not just a chart.
The work behind it.

Power BI

Brand playbook

Every airline on the same like for like months, ranked by resilience score.

Brand	Market	Model	Capacity Stance	Capacity Change %	Passenger Change %	LF Change (pts)	Resilience Score	Resilience Rank	Matched Months
Air India Group	India	Full-service	Cut capacity	-9.0%	-7.2%	+0.5	-6.7	10	6
Akasa Air	India	Low-cost	Added capacity	+7.7%	+8.1%	-0.4	+7.7	2	6
British Airways	UK	Full-service	Held capacity	-1.4%	+0.4%	+0.8	+1.2	4	6
easyJet UK	UK	Low-cost	Added capacity	+7.2%	+2.8%	-3.6	-0.9	7	6
IndiGo	India	Low-cost	Added capacity	+4.0%	+0.2%	-1.8	-1.6	8	6
Jet2	UK	Leisure	Added capacity	+5.7%	+8.9%	+1.2	+10.1	1	6
Ryanair UK	UK	Low-cost	Cut capacity	-7.6%	-5.2%	+0.3	-4.9	9	6
SpiceJet	India	Low-cost	No matched data						
TUI Airways	UK	Leisure	Cut capacity	-3.7%	-5.7%	-2.9	-8.6	11	6
Total			**Held capacity**	**+0.7%**	**+0.2%**	**-0.5**	**-0.3**		**6**

SQL

sql/02_capacity_vs_load_factor.sql

```sql
WITH w AS (
    SELECT b.brand, d.year,
           SUM(f.ask_k) AS ask, SUM(f.rpk_k) AS rpk
    FROM fact_traffic f
    JOIN dim_brand b ON b.brand_id = f.brand_id
    JOIN dim_date  d ON d.month = f.month
    WHERE d.month_num BETWEEN 3 AND 8
      AND d.year IN (2025, 2026)
    GROUP BY b.brand, d.year
)
```

Python

notebooks/05_matched_windows.py

```python
def window(r):
    m = r["month"]
    if pd.Timestamp("2026-03-01") <= m <=
pd.Timestamp("2026-08-01") and (r["brand_id"], shift(m,
-1)) in keys:
        return "Shock"
    if pd.Timestamp("2025-03-01") <= m <=
pd.Timestamp("2025-08-01") and (r["brand_id"], shift(m,
1)) in keys:
        return "Baseline"
    return "Other"
```

Star schema.
16 DAX measures.
Matched months.

$$LF = \Sigma\ RPK\ /\ \Sigma\ ASK$$

$$Cap\% = ASK_{26}\ /\ ASK_{25} - 1$$

so seasonality cancels out

VARESH NIRBHAVNE

Load factor is a **guardrail**, not the goal.

Cut only where volume is cheap to lose

Ryanair UK and Air India held load factor but lost 5 to 7% of passengers.

Add only where demand is proven

Jet2 grew seats 5.7% and filled them. easyJet UK added 7.2% and lost 3.6 pts.

THE HONEST BIT

Descriptive, not causal. No fare data, so no profit view. UK CAA and India DGCA define load factor slightly differently. SpiceJet left out (no 2025 data).

Built in Power BI, SQL, Python.
